

SEVENTEENTH ANNUAL
MICHIGAN MATHEMATICS PRIZE COMPETITION

sponsored by
MATHEMATICAL ASSOCIATION OF AMERICA, MICHIGAN SECTION

PART II

December 5, 1973

INSTRUCTIONS

(to be read aloud to class by supervisor or proctor)

1. Record, in the upper righthand corner of this page, your six digit student number. This is the only way to identify this test booklet with your name. Please do not write your name on the booklet.
2. Part II consists of problems and proofs. You will be allowed 100 minutes for the five questions.
3. You are not expected to solve all problems completely. Look over all problems and work first on those which interest you the most.
4. Each problem is on a different page. You should show most of your work on that page. If it is necessary to use additional paper for your answer, please indicate clearly your identification number and problem number in the upper righthand corner of each sheet.
5. If you are unable to solve a particular problem, partial credit might be given for indicating a possible procedure or an example to illustrate the ideas involved. If you have difficulty understanding what is required in a given problem, note this on your answer sheet and attempt to make a non-trivial restatement of the problem. Then try to solve the restated problem.
6. You are advised to consider specializing or generalizing any problem where it seems appropriate. Sometimes an examination of special cases may generate ideas of how to attack the problem. On the other hand, a carefully stated generalization may justify additional credit provided you give an explanation of why the generalization might be true.
7. Your supervisor is not permitted to violate the rules by answering any questions. When the supervisor announces that the 100 minutes are up, please cease work immediately and insert all significant extra paper, including the questionnaire form, into the booklet. It is not necessary to return scratch paper on which routine numerical calculations were made.

Score

 1 2 3 4 5 Total

1. Solve the system of equations

$$xy = 2x + 3y$$

$$yz = 2y + 3z$$

$$zx = 2z + 3x$$

2. For any integer k greater than 1 and any positive integer n , prove that n^k is the sum of n consecutive odd integers.

3. Determine all pairs of real numbers, x_1, x_2 with $|x_1| \leq 1$ and $|x_2| \leq 1$ which satisfy the inequality:

$$|x^2 - 1| \leq |x - x_1| |x - x_2| \quad \text{for all } x \text{ such that } |x| \geq 1.$$

4. Find the smallest positive integer having exactly 100 different positive divisors. (The number 1 counts as a divisor).

5. ABC is an equilateral triangle of side 3 inches.
 $DB = AE = 1$ in. and F is the point of intersection of
segments \overline{CD} and \overline{BE} . Prove that $\overline{AF} \perp \overline{CD}$.

The following Michigan companies and professional organizations have made financial contributions to the Seventeenth Annual Michigan Mathematics Prize Competition.

Kuhlman Corporation, Kalamazoo
Michigan Bell Telephone Company, Detroit
Michigan Council of Teachers of Mathematics

Agencies submitting contributions to this competition after the printing of this examination will be recognized at the Annual Awards Program sponsored by Michigan Bell Telephone.

The Michigan Mathematics Prize Competition is an activity of the Michigan Section of the Mathematical Association of America.

DIRECTOR

R. A. Laing
Western Michigan University

OFFICERS OF THE
MICHIGAN SECTION

Chairman

G. F. Feeman
Oakland University

Vice-Chairman

A. V. Martin
Grand Valley State College

Secretary-Treasurer

Y. Alavi
Western Michigan University

Governor

M. S. Klamkin
Ford Scientific Laboratory

EXAMINATION COMMITTEE

Chairman

Stanislaw Leja
Western Michigan University

E. A. Nordhaus
Michigan State University

D. A. James
Wayne State University

J. L. Ullman
University of Michigan
